

AGENTIC HARNESS

HackPulse 1.0 • Problem Statements

01 VOICE AI

Build an AI voice agent that understands calls and autonomously handles tasks like booking, ordering, or customer support.

Requirement: Monorepo + modular agent/tool architecture.

02 LOCAL BUSINESS

Build an AI agent that manages enquiries, inventory, orders, and customer communication for a local business.

Requirement: Monorepo + separate frontend, backend, agent, and shared packages.

03 SMART SERVICES

Build an AI agent that manages appointments, queues, cancellations, and notifications automatically.

Requirement: Monorepo + scalable service/agent architecture.

04 BUSINESS OPERATIONS

Build an AI agent that understands business tasks, uses tools to execute them, and seeks approval for critical actions.

Requirement: Monorepo + reusable agents, tools, APIs, and shared packages.

Build with an agentic mindset: agents should reason, use tools, execute actions, and handle real-world workflows.
